

Plugging into the Future: An Exploration of Electricity Consumption Patterns using Tableau

TEAM ID	SWTID-2026-2268
PROJECT TITLE	Plugging into the Future: An Exploration of Electricity Consumption Patterns using Tableau
MAX MARKS	2 MARKS

CHAPTER – III REQUIREMENT ANALYSIS

3.1 – Customer Journey Map

1. Awareness: People start to think that they need to know more about how they use electricity and they want to find a way to look at their energy usage data in a way that makes sense.

Plugging into the Future: An Exploration of Electricity Consumption Patterns using Tableau

- 2. Data Collection:** We get electricity consumption data from sources, including information about states, regions, months, years and how much electricity is used.
- 3. Data Preparation:** We clean up the data we collected and organize it by getting rid of missing information and making sure the fields are correct so we can analyze it properly.
- 4. Visualization:** We create maps and charts with Tableau to show what electricity consumption patterns look like over a year over a month and in different regions and states.
- 5. Analysis:** People look at the maps and charts to see what is happening with electricity usage they compare regions they look at who is using the most and the least electricity and they see how things are changing over time with electricity consumption patterns.
- 6. Insights:** We get an understanding of how people use electricity how it changes with the seasons and how different regions use electricity differently with these electricity consumption patterns.
- 7. Decision Making:** The things we learn from looking at electricity consumption patterns help the people in charge make decisions about how to manage energy, where to put resources and how to save electricity.
- 8. Future Planning:** Looking at electricity consumption patterns helps us guess what will happen with electricity demand in the future.
