

Plugging into the Future: An Exploration of Electricity Consumption Patterns using Tableau

TEAM ID	SWTID-2026-2268
PROJECT TITLE	Plugging into the Future: An Exploration of Electricity Consumption Patterns using Tableau
MAX MARKS	2 MARKS

3.2 – Solution Requirement

1. Data Requirements

- We need an electricity consumption dataset to work with.
- This dataset should have information about the state, region, city, year, month and how much electricity was consumed.

2. Software Requirements

- We will use “Tableau Desktop/Public” to make visualizations and create dashboards for the electricity consumption data.
- Microsoft Excel or CSV files will be used to store and manage the datasets.

3. Hardware Requirements

- A computer or laptop with least 4 GB RAM is required to handle the electricity consumption dataset.
- The computer should have an Intel i3 processor or equivalent to ensure smooth performance.

4. Functional Requirements

- First, we. Connect the electricity consumption data.
- Then we. Prepare the data for analysis.
- Next, we create dashboards and stories to visualize the electricity consumption patterns.

5. Non-Functional Requirements

- The interface should be user-friendly and easy to navigate.

Plugging into the Future: An Exploration of Electricity Consumption Patterns using Tableau

- The visualizations should be accurate and reliable giving us a picture of electricity consumption patterns.

6. Expected Output

- We expect to create Tableau dashboards and stories that provide insights into electricity consumption trends.
- The electricity consumption dataset will give us an understanding of how electricity usage varies by region and over time.
