CHAPTER – IV PROJECT DESIGN

4.1 – Problem Solution Fit

Problem

Electricity use is going up fast because more people are living on earth industries are. The way we live is changing. It is hard to understand how people use energy over different years, areas and groups because there is a lot of data and it is confusing. Without analysis organizations and people who make policies might have problems like:

- Using energy in a not very efficient way.
- Not being able to see when and where people use a lot or a little energy.
- Not having good data to make smart choices about energy.
- Paying more to use energy and wasting it.
- Not knowing how energy use changes with the seasons and years.

Solution

The project "Plugging into the Future: An Exploration of Electricity Consumption Patterns" uses Tableau to look at electricity use data in a way that's easy to understand and interact with. The solution gives:

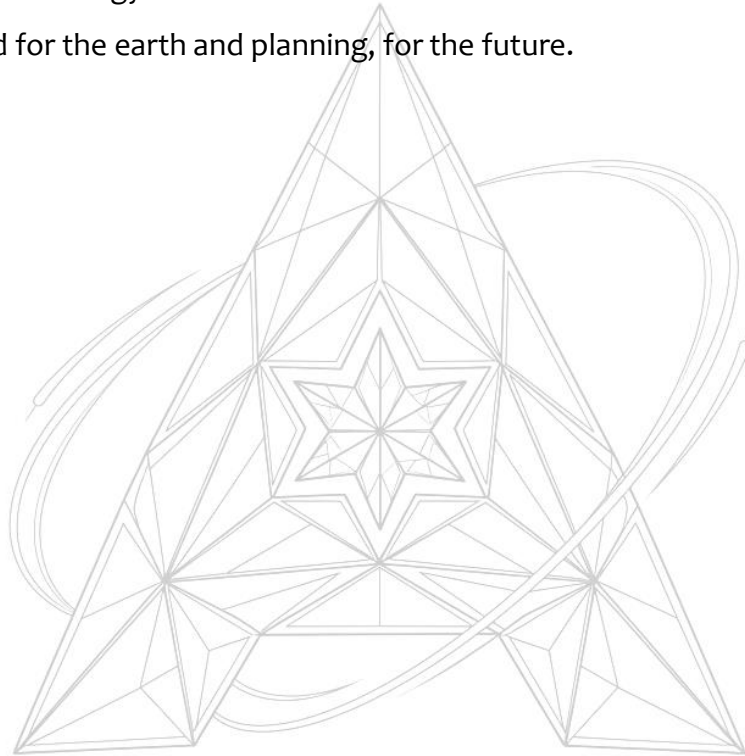

- Dashboards that show energy use trends in time.
- Analysis of energy use by year and area to understand it better.
- Finding out when people use a lot or a little energy.
- Clear pictures that help manage energy and make plans.

Plugging into the Future: An Exploration of Electricity Consumption Patterns using Tableau

- Good data for people who make policies, utility companies and researchers to make choices.

Problem–Solution Fit

This project really helps with understanding complicated electricity use data by turning it into pictures. With Tableau dashboards and reports people who make decisions can see trends use energy better waste less and make choices for managing energy in a way that is good for the earth and planning, for the future.
