

Plugging into the Future: An Exploration of Electricity Consumption Patterns using Tableau

TEAM ID	SWTID-2026-2268
PROJECT TITLE	Plugging into the Future: An Exploration of Electricity Consumption Patterns using Tableau
MAX MARKS	3 MARKS

6.2 – Data Connectivity

Step 1: Open MySQL Workbench

1. Launch MySQL Workbench.
2. Connect to your local MySQL server running through XAMPP.
3. Select the electricity schema from the Navigator panel.

Step 2: Start the Data Import Wizard

1. Expand the electricity schema.
2. Right-click on Tables.
3. Select Table Data Import Wizard.

Step 3: Choose the Dataset

1. Browse and select the consumption.csv file.
2. Click Next.

Step 4: Configure Import Settings

1. Choose Create a New Table.
2. Enter the table name:
 - o consumption
3. Review the column names detected from the CSV file.
4. Verify that the data types are assigned correctly.
5. Click Next.

Step 5: Import Data

1. MySQL Workbench displays a summary of the import process.
2. Click Next to start importing the data.

Plugging into the Future: An Exploration of Electricity Consumption Patterns using Tableau

3. Wait until the import completes successfully.

Step 6: Finish the Import

1. A success message will appear showing the number of records imported.
2. Click Finish.

Step 7: Connect Tableau to MySQL

1. Open Tableau Desktop.
2. Under the Connect pane, select MySQL.
3. Enter the server's name, username, and password.
4. Select the electricity database.
5. Choose the consumption table and load the data into Tableau.

Step 8: Verify Data Connection

1. Check that all rows and columns are loaded correctly.
2. Verify the field names and data types.
3. Begin creating worksheets, dashboards, and visualizations for electricity consumption analysis.
